

Kids and COVID-19

Kids have a 99.997% survival rate from COVID-19. Less than 1% of kids with COVID-19 require hospitalization.

There has been no long-term safety testing of COVID-19 vaccines. The CDC has linked COVID-19 vaccines to increased rates of heart inflammation in teens.

The CDC's Vaccine Adverse Events Reporting System has reports of previously-healthy children dying from heart failure, heart inflammation, and blood clots within days of taking the COVID-19 shot.
